

A. EASA Part 66 Full-Time Taught Programs

1. **Four Year EASA Full-Time Program (with practical skills and work experience)**– This is an Aerojet Engineering initiated structured training program. This program includes engineering practical handskills training as well as the EASA Mandatory Live Aircraft Environment/Experience Training in an EASA certified Part 145 Maintenance Facility, which is a pre-requisite for obtaining an EASA Part 66 License.

Benefits of this course

- This course includes assistance with EASA Part 66 License application, after meeting all the exam and experience requirements.
- Successful completion of this program will lead to a guaranteed job with Aerojet Aviation or its partner facilities worldwide.
- For each annual application cycle, the top 50 highest scoring candidates on their entry aptitude test will be selected to go through a further assessment process to be considered for a full scholarship. Only 10 scholarship slots are available each year and the best 10 will be selected.

Course Times

Tuition times for our Four-Year Full-Time Program are typically 08:00 – 15:00 daily, Monday to Friday (excluding public holidays in Ghana)

Course Fees

Tuition Fees for courses commencing in 2024 can be found on our **fees and prices list for 2024**. Our fees include all technical training notes & study material, tuition and examination fee.

2. **Military Certification Programme B1.1 or B2 (One Year)** – This course is designed specifically for Military personnel who have existing aircraft maintenance experience but no certification. Applicants must have at least 5 years verifiable experience to be considered for this program. This fast-track course is a strictly theoretical intensive program aimed at preparing students to pass all their EASA exams in preparation for their EASA Part 66 License.

Benefits of this course

- This course is subsidized for military personnel only.
- This course includes guidance on EASA Part 66 License application process, after meeting all the exam and experience requirements.
- Candidates who successfully complete this training program with us will become eligible to apply for work experience slots at Aerojet engineering to meet their mandatory 1-year experience requirement in an EASA Part 145 Facility.

Course Times

Tuition times for our Military Certification Program are typically 16.00 – 19.00 daily, Monday to Friday (excluding public holidays in Ghana)

Course Fees

Tuition Fees for courses commencing in 2024 can be found on our **fees and prices list for 2024** our fees include all technical training notes & study material, tuition and examination fee.

NOTE: Custom training programs and certification courses for airlines, operators and groups can be organized and priced specifically for each customer where required.

B. EASA Part 66 Short Modular Courses (Assisted Learning Program)

These courses provide training in discrete Part 66 modules and is suitable for:

- Those looking to convert an existing non-European National licence into an EASA one at their own pace.
- Currently working with an airline as a non-certified technician looking to work towards their EASA Part 66 License at their own pace and convenience.
- Looking to extend one Part 66 licence category such as Category B1 to another such as a B2 or even an A1 to a B1.

Benefits of this Program

- The courses offer assisted learning for each module of the Part 66 syllabus.
- Candidates can attend scheduled classes at convenient times based on our timetable slots for the various modules which run all year round for modular training.
- Students can study at their convenience and tackle whichever module they want at any time.

Course Times

Tuition times for our modular program are typically 10.30 –12.30 (morning Sessions) and 16.00 – 19.00 (late afternoon sessions) Monday to Friday (excluding public holidays in Ghana)

Course Fees

Tuition Fees for courses commencing in 2024 can be found on our **fees and prices list for 2024** our fees include all technical training notes & study material, tuition and examination fee.

IMPORTANT NOTES FOR OUR ASSISTED LEARNING MODULAR PROGRAM

- I. Our modular courses do NOT come with work experience or practical training; therefore, candidates must meet the full experience requirements as stated in the Part 66 Regulations by themselves. Owing to the intensive nature of this course we recommend applicants already have previous aircraft maintenance experience.
- II. Aerojet Academy delivers its Short-Modular courses at our facility on the Accra Technical Training Centre Campus in Kokomlemle Accra. All our modular courses are theory-based and delivered either face-to-face or remotely via video conference for some of our students on a pre-arranged case by-case-basis.

3. Exam Only

You can also apply to sit for an EASA Part 66 Examination Only and you can find our current Examination timetable on **Aerojet 2024/2025 Exam Schedule**.

Candidates for the Exam Only option can study on their own and come and take their exams with Aerojet. The cost of our exams can be found on **fees and prices list for 2024**.

All Exam pricing includes the exam fee, learning material and training notes, along with at least a one to two -hour online review for each module.

If it is your first time booking an exam or taking a course with us, please [register](#) on our Training Academy Portal in order to proceed.

Aerojet's facility is a Certified EASA Part 147 Facility and as such all-EASA Examination rules will apply.

LEAVE THE BELOW FOR NOW.

In addition to the individual modular program, Aerojet offers A crash course route to an EASA B1 or B2 License for those with many years of aircraft maintenance experience seeking to obtain their license in the quickest possible time due to an advertised role or promotion they are going for. A three - hour module overview will be conducted for each module either online or in person to prepare you for the exam. This course can be completed within 24 weeks and the relevant pricing found on Crash Course Pricing.

This course is mostly suitable for those with appropriate experience in the industry, this course is strictly theoretically based, and due to the intensive nature of the Modular Courses, we recommend potential candidates to have a minimum of 3 years previous aircraft maintenance experience to opt for this route.
